Innovation platforms for agricultural development

More information:

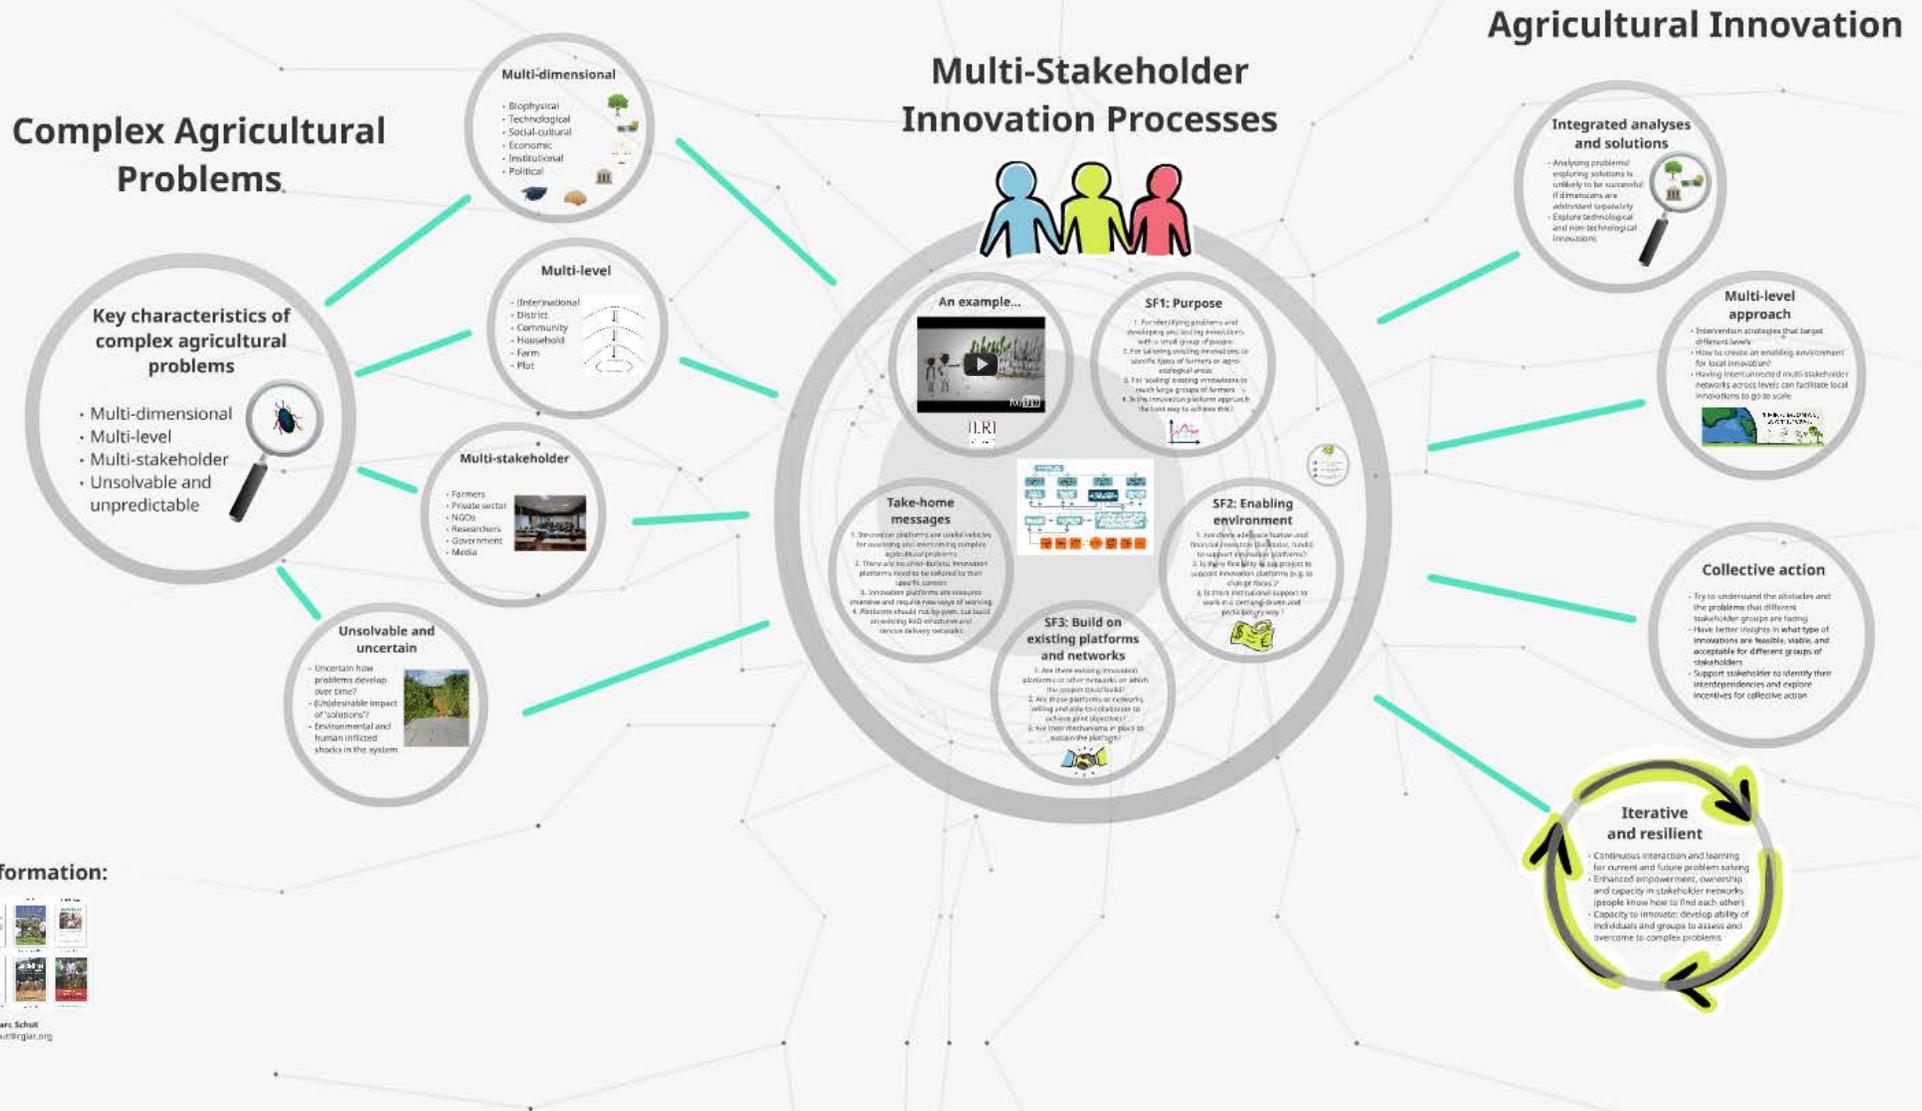

Marc Schuit
m.schuit@cgiar.org

Take-home messages

1. Innovation platforms are useful vehicles for assessing and overcoming complex agricultural problems
2. There are no silver-bullets: innovation platforms need to be tailored to their specific context
3. Innovation platforms are resource intensive and require new ways of working
4. Platforms should not by-pass, but build on existing R4D structures and service delivery networks

Complex Agricultural Problems

Key characteristics of complex agricultural problems

- Multi-dimensional
- Multi-level
- Multi-stakeholder
- Unsolvable and unpredictable

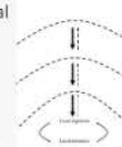

Multi-dimensional

- Biophysical
- Technological
- Social-cultural
- Economic
- Institutional
- Political

Multi-level

- (Inter)national
- District
- Community
- Household
- Farm
- Plot

Multi-stakeholder

- Farmers
- Private sector
- NGOs
- Researchers
- Government
- Media

Unsolvable and uncertain

- Uncertain how problems develop over time?
- (Un)desirable impact of 'solutions'?
- Environmental and human inflicted shocks in the system

- ### Table
1. Innovation platform for assessing agricultural systems
 2. There are no platforms needed to support
 3. Innovation intensive and resilient
 4. Platforms should be based on existing services

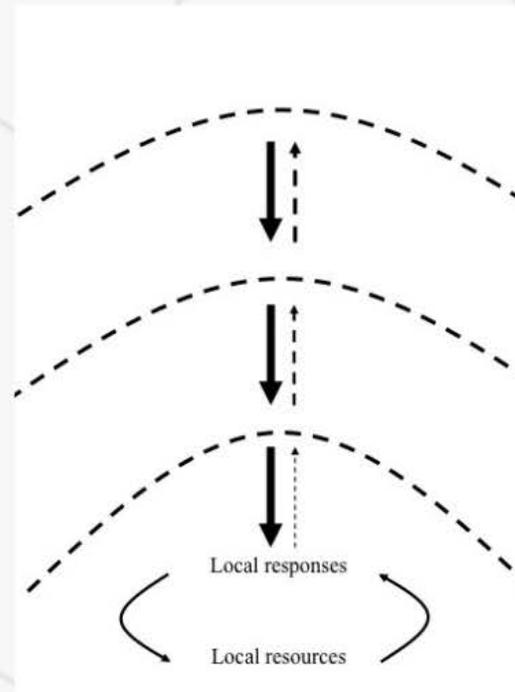

Multi-dimensional

- Biophysical
- Technological
- Social-cultural
- Economic
- Institutional
- Political

Multi-level

- (Inter)national
- District
- Community
- Household
- Farm
- Plot

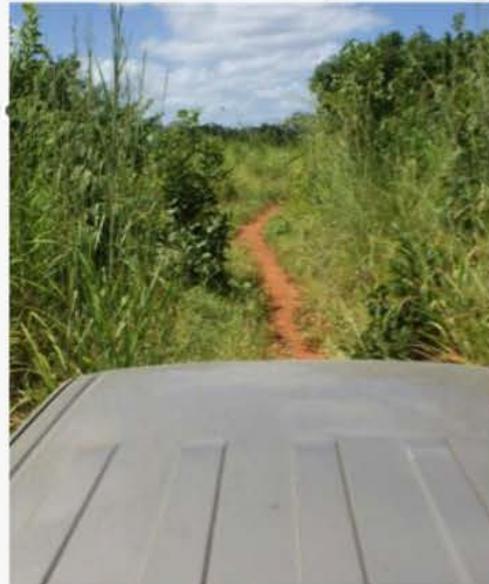

Multi-stakeholder

- Farmers
- Private sector
- NGOs
- Researchers
- Government
- Media

Unsolvable and uncertain

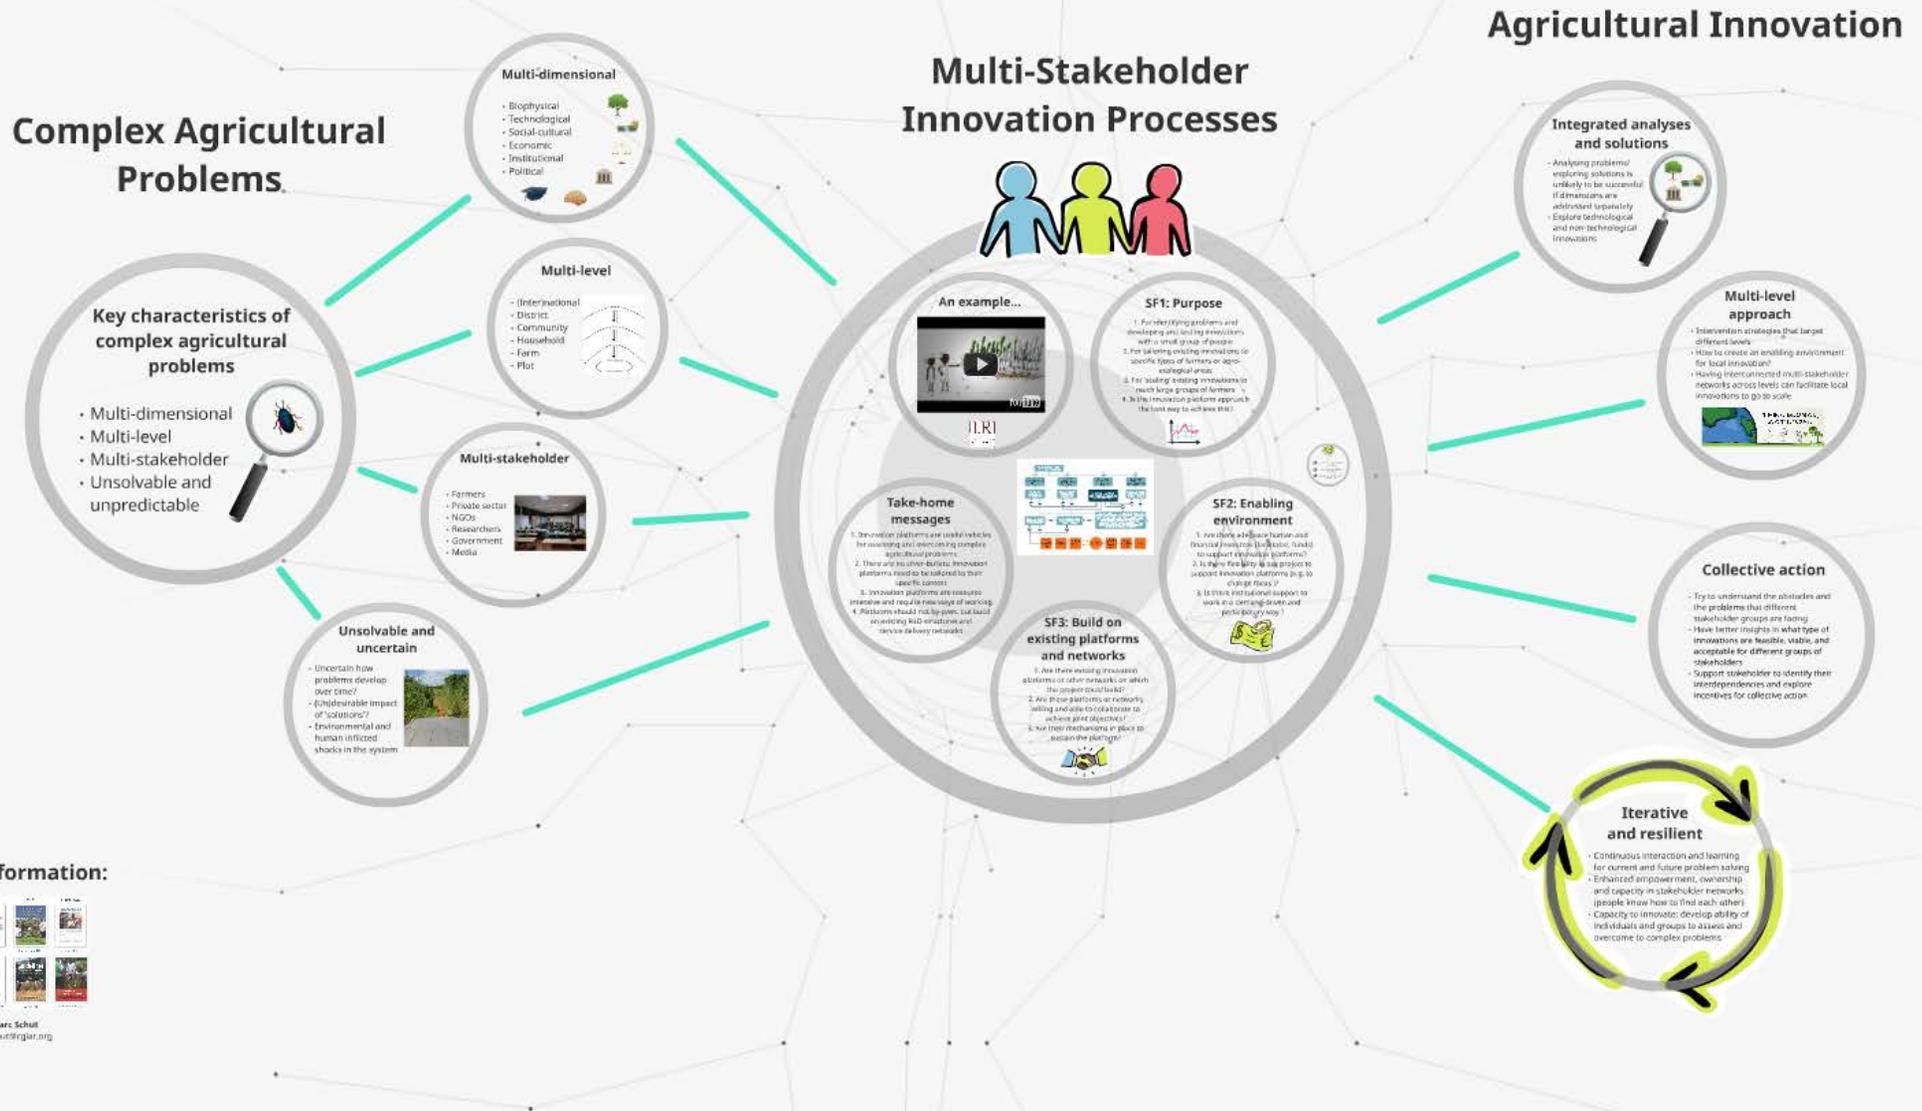

- Uncertain how problems develop over time?
- (Un)desirable impact of 'solutions'?
- Environmental and human inflicted shocks in the system

Agricultural Innovation

Multi-Stakeholder Innovation Processes

Example...

ILRI

vehicles complex innovation their source working at build and

SF1: Purpose

1. For identifying problems and developing and testing innovations with a small group of people
2. For tailoring existing innovations to specific types of farmers or agro-ecological areas
3. For 'scaling' existing innovations to reach large groups of farmers
4. Is the innovation platform approach the best way to achieve this?

SF2: Enabling environment

1. Are there adequate human and financial resources (facilitator, funds) to support innovation platforms?
2. Is there flexibility in our project to support innovation platforms (e.g. to change focus)?
3. Is there institutional support to work in a demand-driven and participatory way?

SF3: Build on existing platforms and networks

1. Are there existing innovation platforms or other networks on which the project could build?
2. Are those platforms or networks willing and able to collaborate to achieve joint objectives?
3. Are their mechanisms in place to sustain the platform?

Integrated analyses and solutions

- Analysing problems/ exploring solutions is unlikely to be successful if dimensions are addressed separately
- Explore technological and non-technological innovations

Multi-level approach

- Intervention strategies that target different levels
- How to create an enabling environment for local innovation?
- Having interconnected multi-stakeholder networks across levels can facilitate local innovations to go to scale

Collective action

- Try to understand the obstacles and the problems that different stakeholder groups are facing
- Have better insights in what type of innovations are feasible, viable, and acceptable for different groups of stakeholders
- Support stakeholder to identify their interdependencies and explore incentives for collective action

Iterative and resilient

- Continuous interaction and learning for current and future problem solving
- Enhanced empowerment, ownership and capacity in stakeholder networks (people know how to find each other)
- Capacity to innovate: develop ability of individuals and groups to assess and overcome to complex problems

Integrated analyses and solutions

An example...

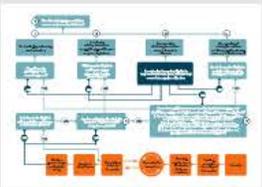

ILRI
INTERNATIONAL
LIVESTOCK RESEARCH
INSTITUTE

SF1: Purpose

1. For identifying problems and developing and testing innovations with a small group of people
2. For tailoring existing innovations to specific types of farmers or agro-ecological areas
3. For 'scaling' existing innovations to reach large groups of farmers
4. Is the innovation platform approach the best way to achieve this?

For upscaling of existing innovations to influence policy, development and business sectors

Are the Innovation Platforms needed to influence policy, development and business?

NO YES

2

As institutional support and impactful innovation platforms? (facilitator, sufficient resources, sufficient platform activities) (to support innovation form feels this is necessary)? (a truly demand-driven and innovation platform?)

Develop strategies scaling of innovations

Transition

SF2: Enabling environment

1. Are there adequate human and financial resources (facilitator, funds) to support innovation platforms?
2. Is there flexibility in our project to support innovation platforms (e.g. to change focus)?
3. Is there institutional support to work in a demand-driven and participatory way ?

ms

Innovation platforms - \$85 f/yr ->
1500 farmers

Farmer Field Schools: \$53 f/yr ->
2500 farmers

Gov extension system: \$7,50 f/yr
-> 17,000 farmers

It seems that Innovation Platforms may not be the most (cost-) effective way to reach your project objectives

Are the Innovation Platforms needed to influence policy, development and business?

NO

YES

NO

YES

Do we have sufficient resources as well as institutional support and flexibility to support the implementation of impactful innovation platforms?

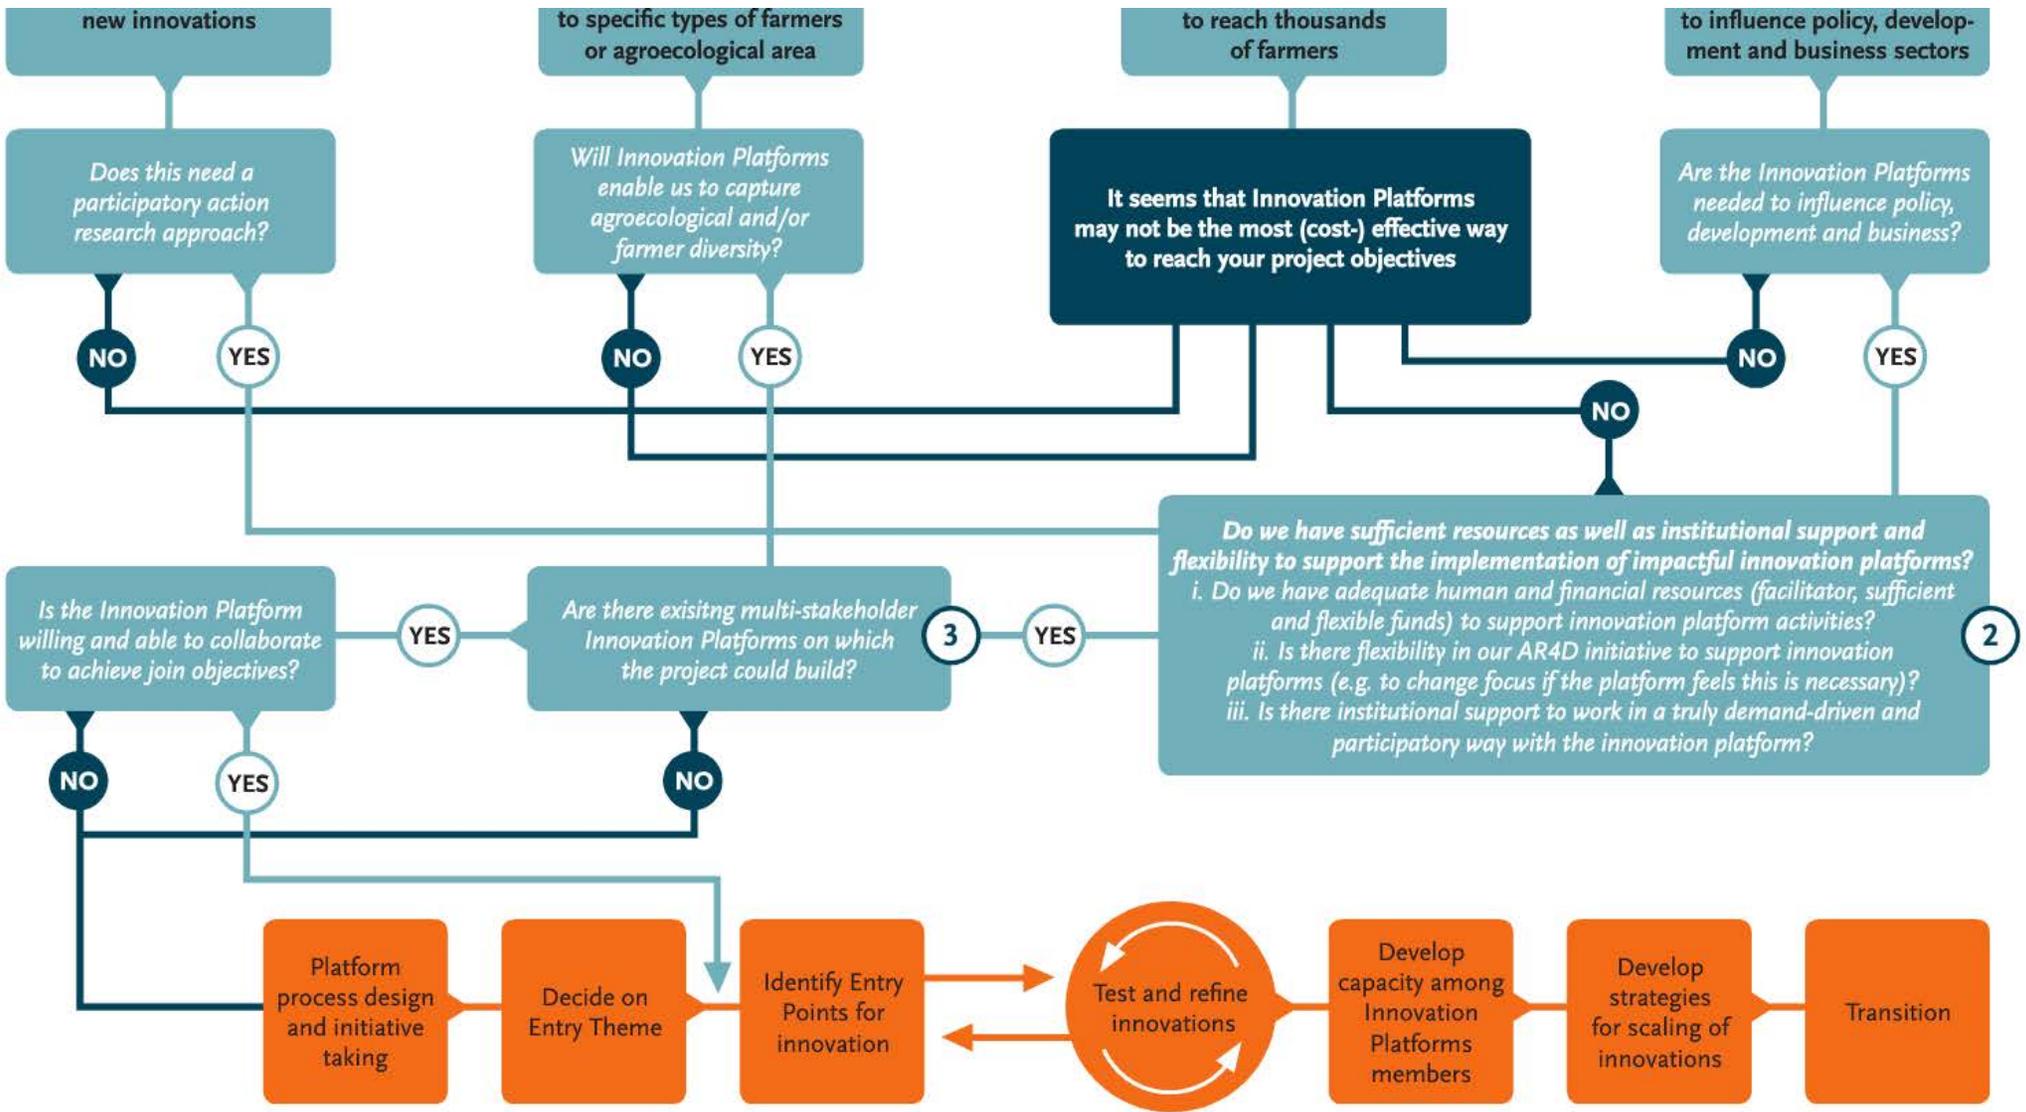

- i. Do we have adequate human and financial resources (facilitator, sufficient and flexible funds) to support innovation platform activities?*
- ii. Is there flexibility in our AR4D initiative to support innovation platforms (e.g. to change focus if the platform feels this is necessary)?*
- iii. Is there institutional support to work in a truly demand-driven and participatory way with the innovation platform?*

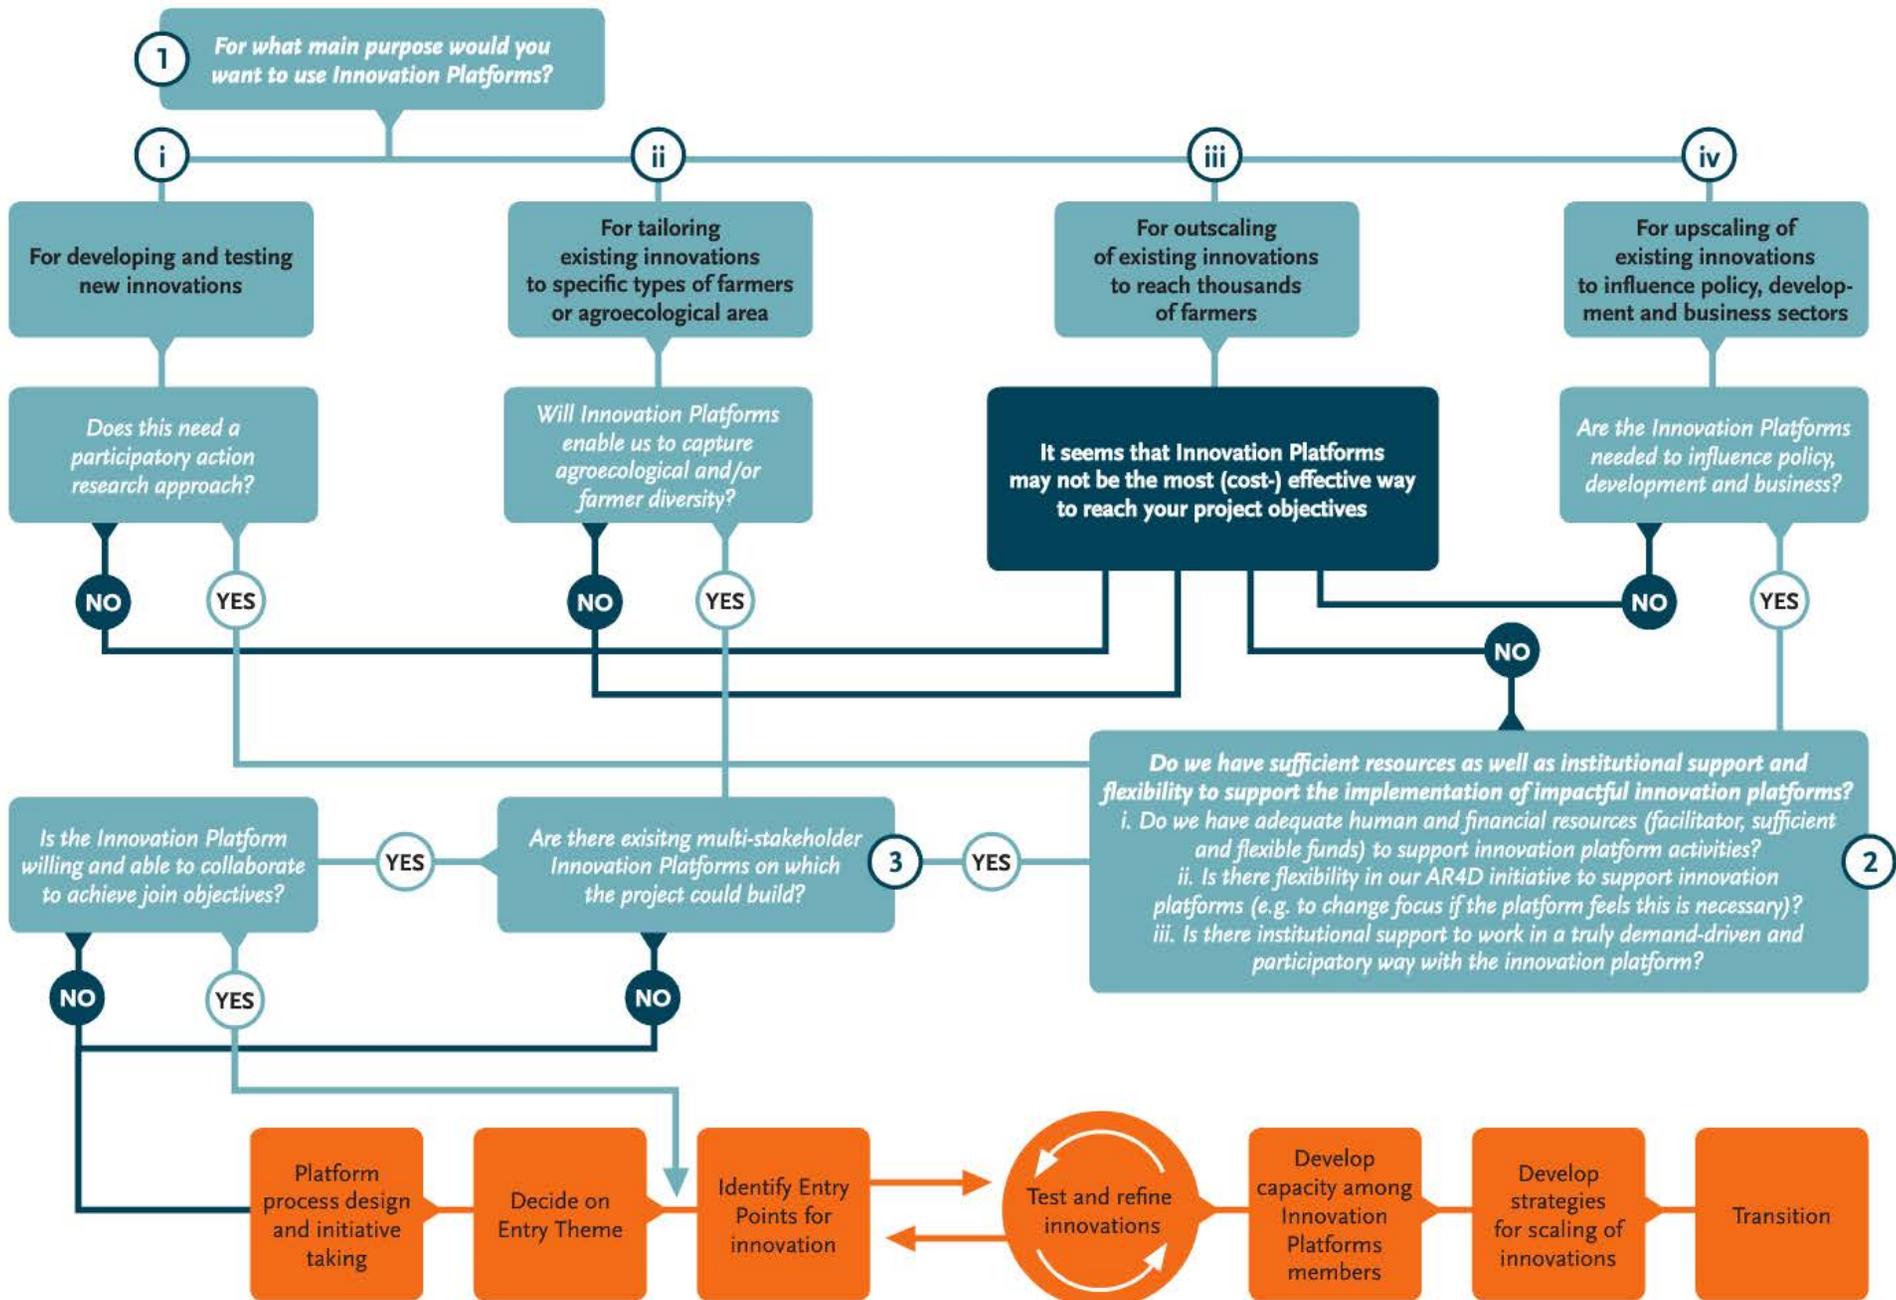

2

SF3: Build on existing platforms and networks

1. Are there existing innovation platforms or other networks on which the project could build?
2. Are those platforms or networks willing and able to collaborate to achieve joint objectives?
3. Are their mechanisms in place to sustain the platform?

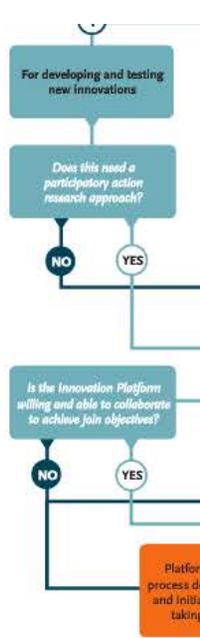

Take-home messages

1. Innovation platforms are useful vehicles for assessing and overcoming complex agricultural problems
2. There are no silver-bullets: innovation platforms need to be tailored to their specific context
3. Innovation platforms are resource intensive and require new ways of working
4. Platforms should not by-pass, but build on existing R4D structures and service delivery networks
